

KiteScribe Product Datasheet

FXBG Foundry LLC

Product	KiteScribe
Platform	Windows 10 and Windows 11
Processing model	Fully local client-side application
Primary functions	Real-time audio transcription, selected-window audio capture, OCR from application windows, and live preview capture.
External interfaces	None

Overview

KiteScribe is desktop software built for environments that need local transcription and visual capture on the workstation. It combines real-time system audio transcription, application-specific audio capture, OCR from selected application windows, and live preview in one operator-facing workflow.

Security and review posture

KiteScribe runs entirely on the host workstation. It has no external APIs, services, or endpoints and does not establish cross-boundary data flows as part of normal operation. Public releases include signed binaries, checksums, SBOM, vulnerability scan summaries, and build verification artifacts. Additional review materials are available directly from the vendor.

Support policy

v1.2.x	Supported through September 30, 2027
v1.1.x	Maintenance only through March 31, 2027
v1.0.x and earlier	Unsupported
